

PiricLawnCare
3.1 DFD Narrative
New System

Process 3.1 - Schedule Job as Calendar Event

This process will fetch a Job object from the Jobs database record and request Piric to enter an associated date and time for the Job.

The scheduled Job will be displayed as a calendar event under the Calendar section of the system, allowing Piric to make adjustments to the scheduled Job as needed.

Process 3.2 - Edit or Remove Job

The scheduled Job event will allow Piric to edit or remove the Job from the system:

- 1. Editing Job details, such as the date & time or the origin for navigation, will be updated for that Job
- 2. Removing a Job will delete the Job from the system (including his schedule on the Calendar) and remove the record of the Job from the Calendar

Jobs that are have not been removed will remain on the Calendar for Piric's review and reporting.
